

## Want to move things with your mind? See a picture of your brain? And earn up to \$250?

The Nathan Kline Institute for Psychiatric Research is conducting a research study about the ability to control a computer using brainpower.

Using functional magnetic resonance imaging (fMRI: no x-rays or radiation), you will learn to control simple computer games with your brain activity. This information will help us understand how networks in the brain interact and how they affect personality and memory.

The study involves 3 visits during which you will complete several assessments of your mental and physical characteristics. Volunteers will be compensated \$250 for completing all three visits.

Residents of Rockland County from 25 to 39 years old are eligible to participate.

**To learn more about becoming a participant, please call [845-398-2183](tel:845-398-2183).**
